May15th, 2018

Hello Everyone!

David, the Trive Team and I have been working hard to get the Trive test bed to you this Spring. You are receiving this email because you have spoken to us about sorting fact from fiction on the internet.

David Mondrus -

> *"Trive Verify represents the first steps into the Trive ecosystem and a future of reliable, transparent, fact checking and accountability across the web. Trive will ultimately verify any piece of data on the internet using a simple interface and a crowd driven engine. Trive Verify allows YOU to get involved right now. It provides us an opportunity to understand what features will best serve the Trive community. Consumer and User engagement in Trive Verify will help grow Trive to the promise of a user driven, fully decentralized application with foundational business structure to support it autonomously into the future."*

Thank you so much for your interest in Trive and its mission to empower users through cryptocurrency to discover truth through wisdom in the crowd. The Trive Engine promises to dispel falsehoods found in public discourse on any subject and pay those who do that important work through the human action token, Trive.

Trive Verify is the step that we take together toward a better use of time and resources for truth discovery.

Whether you are simply a consumer who wants a reliable review of content so you may allocate your time more effectively, a user who plans to make their living *Triving* information to help others make better decisions, an independent blogger or a large newsroom - if you care about unblemished truth in an open environment, Trive can be your fact checking resource.

Trive will allow you freedom and reliable credibility at a fraction of the cost of employing such quality directly, or doing detailed fact-finding work yourself. That's right, using Trive to kill fake news and false information before it can monetize our time and resources helps us all live better more effective lives!

We want you to be a part of Trive right from the beginning! We know you care about truth or you would not be here already.

Get started with the web tool or install the plugin by visiting Verify.Trive.News now! You can:

- **Submit a factoid to be checked now on the Trive Verify test bed.**
- **Register, log-in, and complete at least 1 (one) research or verify job to qualify for incentives for early adopting users.**
- **Comment on your experience to help us build the best application we can with Trive!**

A full press release is below. But… to skip ahead, you can click here to [learn all about Trive Verify](#).

See a [project overview for Trive](#).

[Read the Whitepaper](#) to understand Trive at full development.

Join us and help build Trive and a better Internet today!

If you are in NYC this month and would like to arrange a meeting directly with David Mondrus concerning Trive, please contact Molly Jacobson (molly@trive.news). David will be attending the following events this week and is available for private consultation as his schedule allows:

- May 14-16: Consensus NYC
- May 17-18: City Blockchain Summit

As I mentioned, you have received this email because somewhere in this ever shrinking world our paths have crossed. If you are interested in participating in a pre-sale purchase of Trive tokens or a structured equity investment, that opportunity is available in advance of our ICO roadmap implementation. Please contact us for details.

I will leave you with thoughts that came to me when asked recently why I chose the Trive project.

"We all inherently know, and do not have to be taught, that no good decision can be made on flawed information and lies. Trive is an expression of David's passion to take responsibility for the world he lives in. His passion is infectious and the product of his mind, simply inspiring."

The truth is the truth no matter who speaks it.

Trive Announces Test Bed Launch and NYC Road Tour

New York, 15 May, 2018 - Trive, a social science global consensus engine that researches and clarifies facts and empowers users through cryptocurrency to discover truth through wisdom of the crowd, has announced the launch of its highly-anticipated test bed and upcoming attendance at New York Blockchain Week. For the Trive team, this marks another milestone in their mission to take down fake news and devalue the sources that spread it.

The test bed, titled Trive Verify, is the beginning of the build out of the Trive ecosystem. Its core function within the Trive development plan: research into a single factoid and user community engagement. Consumers and publishers can use Trive Verify to fact check information found on the internet while all users contribute to Trive's decentralized fact finding engine development. Captured images, URLs and consumer directives are uploaded via the Trive browser plugin or web tool to the Trive Verify Engine where researchers and verifiers proceed to add support to, or negation of the purported fact from the submission through their work. By choosing how many researchers and verifiers will review a factoid, consumers can select added degrees of precision and quality to the research scope.

Once the work is complete, the Trive Engine notifies via email, as well as posting the score of the research directly to webpages that have been 'trived' and later visited by anyone with the installed plugin. Trive further allows direct access to actual research materials offering anyone an opportunity to see behind the curtain and gain an earned trust of the Trive Engine process. Trive will create a Nash Equilibrium, game theory based, incentive structure for research into news stories and other claims of fact. Adversarial tokenized collusion proof interaction between user types is what will drive the Trive Engine at full development. Trive Verify is that first step.
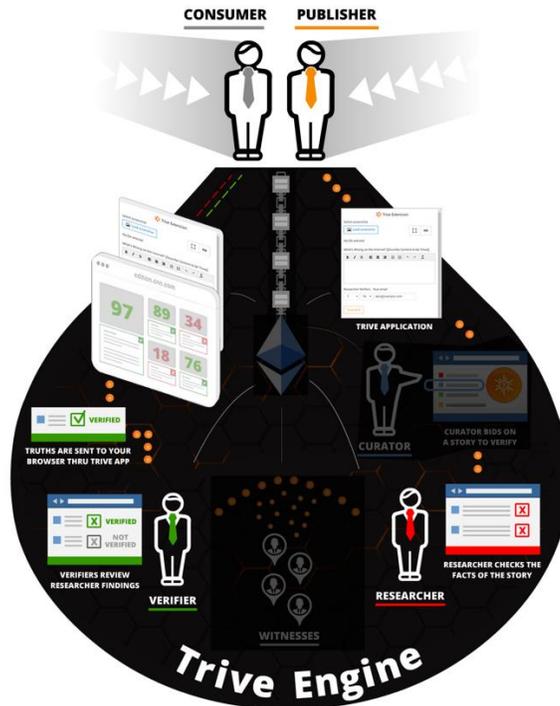

Trive CEO, David Mondrus, explains, "Trive Verify represents the first steps into the Trive ecosystem and a future of reliable, transparent, fact checking and accountability across the web. Trive will ultimately verify any piece of data on the internet using a simple interface and a crowd driven engine. Trive Verify allows YOU to get involved right now. It provides us an opportunity to understand what features will best serve the Trive community. Consumer and User engagement in Trive Verify will help grow Trive to the promise of a user driven, fully decentralized application with foundational business structure to support it autonomously into the future."

Mondrus' experience with fake news digs deep into his past. Born in the propaganda-fueled climate of the Union of Soviet Socialist Republics (USSR), Mondrus understands first-hand the very real dangers of fake news. "The expression was that you learned to read between the lines, before you learned to read," Mondrus explains.

"We all inherently know, and do not have to be taught, that no good decision can be made on flawed information and lies. Trive is an expression of David's passion to take responsibility for the world he lives in. His passion is infectious and the product of his mind, simply inspiring." adds Matt White, COO of Trive.

Meet the Trive Team at These Events:

1. May 14-16: Consensus NYC
2. May 17-18: City Blockchain Summit

To kick-off the launch of Verify, Trive CEO David Mondrus will be attending New York Blockchain Week, a week-long blockchain initiative with over 80 events. The leading event, Consensus, will draw in an estimated 10,000 attendees, up from just 2,700 in 2017. Bringing together industry leaders and blockchain enthusiasts, Consensus is one of the premier blockchain events in the United States.

About Trive:

Trive is a non-cooperative equilibrium engine using social science to research and confirm facts. Trive incentivizes users to discover truth through an antagonistic human action model using cryptocurrency. Combining wisdom of the crowd and game theory, Trive is poised to enable people around the world to research, verify and score the truth of almost any piece of information while securing that proof to the blockchain as an infinite index in an unalterable state. Trive seeks to end historical negationism and build a fertile seedbed of unadulterated facts for future generations to build upon their own knowledge and understanding.
